

Mineral Composite Vanity Tops

Mineral Composite Vanity Tops

INFORMATION GUIDE

Mineral Composite is a material that fully utilizes the extraordinary properties of dolomite. The combination of dolomite and elastic resin imparts unparalleled durability and impact-resistance to Mineral Composite. The external surface is covered with gelcoat. This type of coating is also applied to the surface of yacht hulls and wind turbine blades – places exposed to constant contact with the elements: wind and water.

We offer Mineral Composite tops in two designs, both with an integrated sink. The Peak top is slightly deeper, and features a design focused on lines and edges, compared to the Crest top, which edges and corners flow in a smooth, swooping design. Both designs are user friendly and offer all the same great benefits of Mineral Composite tops.

Peak

(With overflow to back. Chrome or White overflow outlet, both included with each top)

Crest

(With overflow to back. Chrome or White overflow outlet, both included with each top)
